

RECYCLED PRODUCTS: Compost

FACT SHEET

This fact sheet is designed to provide you with information on how locally produced recycled products can be used in place of products made on the mainland or from virgin materials.

Most Hawaii soils are nutrient deficient and contain very little organic material. Experts recommend amending your soil with soil-conditioning compost. Compost attracts beneficial organisms which release nutrients and aerate soil, and prevent compaction which leads to poor root growth. Locally, Hawaiian Earth Products produces blends of topsoil and compost, as well as blends including fertilizers, manure, sand, and cinder. Blends can also be customized to meet your specific needs.

Compost and compost blends are proven to enhance the nutrient and aeration quality of Hawaii's soil.

Recycled Products

- Biosolid
- Compost
- Eko Premium
- Menehune Magic Organic Soil Conditioner
- Menehune Magic Cover Mulch
- #2 Mulch

Demonstration Sites

- Ihilani Resort
Putting green & Hula Mound
- Hale Koa Hotel Landscaping
- Waipahu Soccer Complex
- Iolani School Football Field
- Waipio District Park
- Polynesian Cultural Center
- Central Oahu Baseball Complex
